

基础13. 堆栈内存分配流程与内存泄漏

stack and heap

按值传递 (拷贝)
`int func(int a){`

`int b = 10;`

`a = b;`

`return a;}`

`int main() {`

`int c = 30;`

`int d = func(c);`

`return 0;}`

`void func(int *a){`

`*a = 10;}`

`int main() {`

`int c = 30;`

`func(&c);`

`return 0;}`

```
void func(int *a){
```

```
    a = int new(10);
```

返回堆栈地址

```
int main(){
```

```
    int C = 30;
```

```
    func(&C);
```

```
    return 0;
```

```
void func(int **a){
```

```
    *a = int new(10);
```

```
int main{
```

```
    int *C = nullptr;
```

```
    func(&C);
```

```
    return 0;}
```
